IREX*plus* Introduction

Responsive Content Management System (CMS) Features and Functions

Content management system (CMS) features and functions help manage internal corporate documentation and information, Web site content, and group collaboration. Typical content management system features and functions include tools for content. To find the best content management system for your business, it's important to understand which features and functions you need before you compare content management solutions.

Analytics

CMS integrates seamlessly with third party traffic analysis tools like Google Analytics.

Search

In the application, a search box and Advanced Search option make it possible to get to the items you're interested in quickly. Advanced search exposes all the additional properties of your content as searchable fields to help you aggregate the items that you need to modify.

Security

The CMS supports an unlimited number of Users, which are commonly used to administer both secured access to content on the website and for Workstation access to author and edit content

Licensing

CMS is available in different editions per domain name. Determine which of these models will cover your content management needs.

IREX*plus* Technology

Server Platform

CMS is designed to operate on the Microsoft Windows Server operating system.

Web Server

CMS leverages Microsoft Internet Information Services (IIS) 6.0 or higher as its web server technology for Web Services, the CMS Workstation (content administration interface), and the primary website application.

Application Framework

CMS is developed on the Microsoft .NET Framework version 4.

Recent versions of CMS, are enabled to utilize the built-in AJAX support of .NET This gives custom component developers the flexibility to utilize the latest development technologies in the .NET Framework.

Database and languages

The system is based on Microsoft SQL database, and use .net technology with JavaScript and CSS.
